

Enterprise ERP & CRM Development Roadmap

Objective: Build a production-grade ERP & CRM platform with modern architecture, inspired by enterprise workflows while using an original UI, branding, and implementation.

Phase 1 – Foundation

Project setup, Next.js + Django architecture, PostgreSQL, JWT auth, RBAC, Docker, Redis, Celery, base UI components, API conventions, audit logging.

Phase 2 – Dashboard

Executive dashboard, KPI cards, CRM funnel, sales overview, notifications, tasks, activity feed, charts, configurable widgets.

Phase 3 – CRM

Lead management, pipeline, Kanban, appointments, follow-ups, notes, attachments, lead scoring, imports/exports, filters, search.

Phase 4 – Customer Management

Customer profiles, addresses, GST/PAN, documents, communication history, customer timeline.

Phase 5 – Quotations

Quotation builder, GST, PDF generation, templates, approvals, version history, email/WhatsApp, convert to sales order.

Phase 6 – Orders

Sales orders, delivery scheduling, partial fulfillment, order tracking, convert to invoice.

Phase 7 – Invoicing

B2B/POS invoices, credit/debit notes, print templates, GST-ready billing, PDF/email.

Phase 8 – Recovery

Outstanding payments, reminders, payment recording, aging reports, WhatsApp/email reminders.

Phase 9 – Contracts & Support

AMC/contracts, renewals, warranty, ticketing, SLA, attachments, internal notes.

Phase 10 – Operations

Purchases, suppliers, inventory, warehouses, manufacturing (BOM, production, WIP), stock movements.

Phase 11 – Accounts

General ledger, journal entries, P&L, balance sheet, GST reports, financial statements.

Phase 12 – Reports & Analytics

Advanced reporting, dashboards, exports (PDF/Excel/CSV), executive insights.

Phase 13 – AI Features

AI quotation drafting, lead summaries, forecasting, assistant, natural language search.

Phase 14 – Quality & Deployment

Testing, optimization, security hardening, monitoring, backups, CI/CD, production deployment.

Technical Stack

Frontend: Next.js 15, React 19, TypeScript, Tailwind CSS, shadcn/ui, TanStack Table, React Hook Form, Zod, Recharts, Framer Motion.

Backend: Django 5, Django REST Framework, Django Channels, Celery, Redis.

Database: PostgreSQL.

Infrastructure: Docker, Nginx, Gunicorn, Cloudflare R2 (storage).

Development Rule

Implement one phase completely before moving to the next. Every module must include database models, REST APIs, frontend screens, validation, permissions, tests, documentation, and integration with existing modules.
